 Further documents are listed in the continuation of Box C.

- \* Special categories of cited documents:
- "A" document defining the general state of the art which is not considered to be of particular relevance
  - "E" earlier application or patent but published on or after the international filing date
  - "L" document which may throw doubt on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
  - "O" document referring to an oral disclosure, use, exhibition or other means
  - "P" document published prior to the international filing date but later than the priority date claimed
- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
- "G" document member of the same patent family

(54) Title: SYSTEM AND METHOD FOR WIRELESS NETWORK CONTENT CONVERSION FOR INTUITIVELY CONTROLLED PORTABLE DISPLAYS

(57) Abstract: A system and method is described for converting wireless computer network rich content from display frames geared for Internet-connected PCs to display frames which are geared for wireless hand-held devices and sent over a wireless network. Such conversions are specifically for hand-held devices which use a system of instantaneous and intuitive visual access to visual data using motion control. The use of motion-controlled hand-held devices with such a system allows for the elimination of pen or button scrolling and wireless navigating. Frames are specifically converted to match a set of hand-held user preferences, match the display requirements of the device, and implement features which eliminate display problems normally present in hand-held wireless displays.
